		interface with the machine learning model	
5	Database	Stores structured insurance claim data and user information	MySQL / NoSQL Database
6	Cloud Database	Cloud-based storage used for storing insurance claim datasets	AWS S3
7	File Storage	Storage for datasets, trained machine learning models, and application logs	AWS S3 / Local File System
8	Machine Learning Model	Model used to detect fraudulent insurance claims	Random Forest Algorithm
9	Infrastructure (Server / Cloud)	Environment where the application and model are deployed	Local Server

Table-2: Application Characteristics:

S.No	Characteristics	Description	Technology
1	Open-Source Frameworks	Open-source tools and frameworks used to develop the application and machine learning model	Python, Flask, Scikit-learn, Pandas
2	Security Implementations	Security mechanisms implemented to protect user data and system access	HTTPS, SHA-256 Encryption, Authentication
3	Scalable Architecture	The system architecture is designed to allow scaling as data and users increase	Cloud Architecture, Microservices
4	Availability	Ensures continuous system availability through monitoring and cloud services	AWS CloudWatch, Cloud Deployment
5	Performance	System designed for efficient processing and quick prediction responses	Flask API, Optimized Random Forest Model
